AWARNING

YOU AND OTHERS CAN BE SERIOUSLY INJURED OR KILLED IF WARNINGS ON THE EQUIPMENT, IN THIS OWNER'S MANUAL AND VIDEO ARE NOT FOLLOWED.

 Before starting this or any other exercise program, consult your physician. Your physician should assist you in determining the target heart rate zone appropriate for your age and physical condition. Certain exercise programs or types of equipment may not be appropriate for all people. This is especially important for people over the age of 35, pregnant women, or those with pre-existing health problems or balance impairments. If you are taking medication which may affect your heart rate, a physician's advice is absolutely essential.

2) Start out slowly and progress sensibly.

Even if you are an experienced exerciser, start with the beginner workout and become familiar with all of the exercises before moving on to more advanced workouts or exercises. For best results, perform all of the exercises at the tempo demonstrated in the video.

- 3) Do not overexert yourself with this or any other exercise program. Listen to your body and respond to any reactions you may be having. You must learn to distinguish "good" pain, like fatigue, from "bad" pain, which hurts. If you experience any pain or tightness in your chest, an irregular heartbeat, dizziness, nausea, or shortness of breath, stop exercising at once and consult your physician immediately.
- 4) Warm up before any exercise program by doing 5 to 10 minutes of aerobic activity, followed by stretching.
- 5) Before EACH use, visually inspect the equipment. Never operate the equipment if the equipment is not functioning properly.
- 6) USE CARE when getting on and off the equipment. Set up and use your equipment on a solid, level, carpeted surface. Follow the instructions demonstrated in your video and as instructed with the exercises on pages 44 through 82 for proper exercise techniques.
- 7) Use this equipment ONLY for the intended use as described in this manual. **Do not** modify the equipment or use attachments not recommended by the manufacturer.
- 8) Have plenty of clearance behind and in front of your equipment. It is important to keep children, pets, furniture and other objects out of the way when using your equipment.
- **9) Wear appropriate clothing when exercising.** Workout clothing should be comfortable and lightweight, and should allow freedom of movement. Wear comfortable athletic shoes made of good support with non-slip soles, such as running or aerobic shoes.

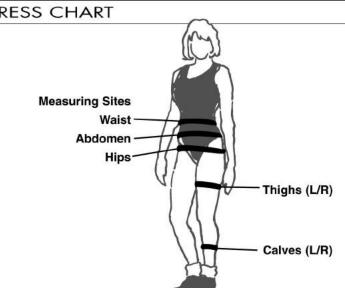

- 10) THIS EQUIPMENT IS NOT FOR USE BY CHILDREN. Parents and others in charge of children should be aware of their responsibility because the natural play instinct and the fondness of experimenting of children can lead to situations and behavior for which the training equipment is not intended. To prevent injuries, keep this and all fitness equipment out of the reach of children. Follow these simple rules:
 - Keep children out of rooms where you have your exercise equipment.
 - Store exercise equipment in a room that can be locked.
 - Know exactly where your children are when you work out.
 - If you have small children at home, don't wear headphones while you work out.
 - Talk to your kids about the dangers of exercise equipment.
- **11) Breathe naturally,** never holding your breath during an exercise. Avoid over training. You should be able to carry on a conversation while exercising.
- **12) Cool down after an exercise session,** with 5 to 10 minutes of slow walking, followed by stretching.
- **13) Handicapped or disabled people must have medical approval** before using this equipment and should be under close supervision when using any exercise equipment.
- 14) Only one person at a time should use this equipment.
- **15) DO NOT put hands, feet, or any foreign objects on or near this equipment when in use by others.** Use caution not to pinch fingers or hands in moving parts when setting up or using the equipment.

Every two weeks, measure yourself and use the chart below to record your progress. Before writing on it, make as many copies as you think you'll need. We suggest you keep these in a notebook. You will find it both informative and motivational to look back at what you've done. This data will help you chart future fitness goals

as you continue to improve.

Smart Progression

In regard to progressing to a higher intensity level, No one cardiovascular activity is better than another! longer duration, or more frequent sessions, it makes Manipulating how hard (intensity), how often (duration), good sense to change only one of these elements at and how long (frequency) you participate in a a time. You run a higher risk of overuse injury if you particular aerobic activity determines its effectiveness simultaneously increase more than one of these or lack thereof. And of course, you have to like what elements. A conservative yet effective guideline is to you're doing. Choose the type of aerobic activity that increase intensity or duration by no more than about is right for you by identifying one or more types of 5 percent. You should adapt to this increase over a cardio exercise that you can see yourself sticking to, period of a week or two, and then consider changing and enjoying, for the rest of your life. Often, the best one of the other variables (frequency, duration or aerobic exercise will be not one, but several activities intensity) or further progressing the one you've that are fun and feel good to your body. Excellent adapted to. cardiovascular activities include, but are not limited to, walking, swimming, water fitness, jogging, running, cross-country skiing, in-line skating, lateral movement training (slide), cycling, mountain biking, and step training.

The training program that follows is a progressive training program for cardiovascular conditioning. It can be used for any aerobic activity you choose. But remember, these are only guidelines. People with medical conditions should discuss this training program with their physician.

Top Aerobic Exercise

How Often, How Long, and How Hard

The choices you make about the frequency (how often), duration (how long), and intensity (how hard) at which you will train, will directly influence your training results.

How often. If you want to see serious improvements in your fitness, lose weight and develop a good training base, you need to do cardio workouts three to six times per week.

If you are just starting a program or out of shape, don't let these recommendations discourage or mislead you. Realize that doing cardio training two to three times per week will still result in significant fitness improvement and health benefits. Your long-term goal is to build up to exercising your heart on most days of the week.

How long. How long you work out depends on your current level of fitness. Again, if you're just starting a program or out of shape, don't follow strict textbook recommendations. Instead, start with 5 to 10 minutes once or twice per day. You will see significant fitness improvement. Your long-term goal is to build to a duration of 30 to 60 minutes of cardiovascular activity on most days of the week.

How hard. Aerobic intensity guidelines for healthy adults are generally set at 60 to 85 percent of heart rate. But, if you're out of shape, remember that moderate to low level and consistent cardiovascular training – well below the standard recommendations set forth - can result in substantial and beneficial effects to your health and can greatly improve cardiovascular endurance.

You can use the following calculation to determine what percentage of your heart rate you are working at:

% heart rate = $(220 - age) \times \%$.

Using this calculation, a 70% heart rate for a 40 year old would be (220 - 40) x 70% or 126. Thus, this individual would need to reach 126 beats per minute to equal a 70% heart rate.

The above are guidelines, people with any medical limitations should discuss this formula with their physician.

Congratulations!

Congratulations on your purchase of the Bio Force™ TNT System! You've just taken an important step toward your lifelong fitness goals. Whether that means building a strong defined chest, lean sexy legs or total body sculpting, the Bio Force™ TNT System can help you get the results you desire.

The Bio Force™ exerciser is a solid piece of equipment that uses nitrogen-charged cylinders to give you resistance through an exercise's entire range of motion. With over one hundred body shaping exercises, you have everything you need to start your own total body workout program. The Bio Force™ allows you to tone and firm the major muscle groups of your upper and lower body. This is vital for everyone regardless of age, sex, or fitness level.

To help you get started, we have included this thorough Owner's Manual. It includes Eric Lichter's "8 Week Body Transformation Plan," descriptions of all of the Bio Force™ exercises and an Aerobic workout guide. Also included are Eric's Personal Workout Charts - a "Big and Ripped" workout for men and a "Long and Lean" plan for women. Finally, you also have Eric's Instructional Video which features tips on proper form and technique along with a handy assembly video and a Healthy Eating Plan Booklet. These tools will give you a core group of exercises, and workout and nutrition plans to help you get results.

Be sure to read through this Owner's Manual carefully.

If during the course of using your system, you have any questions about the program, please contact your local distributor. As always, you have our personal assurance that we want your complete satisfaction. After all, your success is our success too!

Sincerely,

HAMMER Sport AG **FINNLO Bio Force - Trainingserfolge** Von-Liebig-Str. 21 89231 Neu-Ulm GERMANY

NO FORCE

Exercise that challenges the heart is a simple part of an exercise program - almost anyone can walk, run, treadmill, climb steps, or bike. But, creating a progressive, time efficient and results oriented cardio program takes a little planning. A properly designed and consistently performed cardiovascular training program is an essential part of your program if you want to improve your health and lose weight, or maintain a healthy lifestyle.

Training Aerobically

Aerobic exercise is the key to building a stronger heart and can reduce your chances of heart disease, as well as burn lots of fat and calories. Aerobic exercise is any activity that you can keep at for several minutes or longer and increases your heart rate. Activities that have the potential to condition the heart typically involve the large muscles of the hips, thighs, and buttocks. Examples include walking, hiking, jogging, running, cycling, in-line skating, swimming, cross-country skiing, and stair stepping.

Benefits of Aerobic Training

Health benefits of aerobic exercise include the following:

- 1. A stronger and healthier heart.
- 2. Increased HDL. This "good" cholesterol helps keep your arteries unplugged and healthy.
- 3. Decreased total cholesterol. This is the debris in your blood that can clog your arteries.
- 4. Reduced blood pressure. Even moderate exercise can help.
- 5. Reduced risk for heart attack and stroke.
- 6. Decreased body fat and an ability to help you reach your desirable weight. You'll become a better fat-burner and burn a lot of calories every session.
- 7. Decreased risk for diabetes.
- 8. Reduced feelings of anxiety, tension, and depression.
- 9. Improved sleep.
- 10. Higher levels of energy. Efficient delivery and use of blood and oxygen is the key to increased vigor and performance.

CARDIOVASCULAR CONDITIONING

Warming Up And Cooling Down

Warming up and cooling down are essential to a balanced and safe exercise program. A proper warm-up and cool-down can:

- Make your workouts safe and easier to do.
- · Limit the risk of unnecessary stress on your heart,
- Get you ready for your activity,
- Improve your stamina and endurance (you won't tire as quickly),
- · Decrease your risk for injury,
- Increase enjoyment of your workouts, and
- · Help you stick with your health and fitness program.

Warm-Up

To prevent injury and maximize performance, we recommend that each workout period should start with a warm-up. Your warm-up should gently prepare your muscles for the coming exertion. Start by doing 5 to 10 minutes of gentle exercise that gradually increases your heart rate and loosens up your muscles. Your warm-up exercise should be aerobic in nature and only require an easy, unforged range of motion. This should be followed by 5 to 10 minutes of stretching. Refer to the stretches found on pages 40 and 41 of this manual. Never push yourself beyond a point of gentle tension or strain. Keep your movements gentle, rhythmic and controlled.

Cool Down and Stretching

Your workout should be followed by a cool down. The cool down should consist of 5 to 10 minutes of slow walking followed by stretching. Refer to the stretches found on pages 40 and 41 of this manual. Never push yourself beyond a point of gentle tension or strain. Keep your movements gentle, rhythmic and controlled.

TIPS: Keep elbow in start position throughout exercise. Do not open elbow to side. Maintain upright posture in seated position. Avoid tilting or rotating to one side while extending arm. Contract abdominals to stabilize torso. Perform on both sides.

94 STANDING TRICEPS PUSHDOWN

START: Stand facing frame. Feet hip width apart on base. Grip lat bar in overhand. shoulder width grip with palms facing down. Bend elbows 90 degrees.

MOTION: Extend elbows and press bar down toward thighs. Pause at bottom of motion. Bend elbows back to starting position.

TIPS: Hold elbows at sides of ribcage. Do not move upper arms while extending elbows. Maintain upright posture throughout exercise. Avoid rounding spine forward while pressing down. Contract abdominals to stabilize torso.

95 REVERSE GRIP TRICEPS PUSHDOWN

START: Stand facing frame. Feet hip width apart on base. Grip lat bar in underhand, shoulder width grip with palms facing up. Bend elbows 90 degrees.

MOTION: Extend elbows and press bar down toward thighs. Pause at bottom of motion. Bend elbows back to starting position.

TIPS: Hold elbows at sides of ribcage. Do not move upper arms while extending elbows. Maintain upright posture throughout exercise. Avoid rounding spine forward while pressing down. Contract abdominals to stabilize torso.

ASSEMBLY INSTRUCTIONS

- **b.** Set the Backrest Support Frame Assembly in place by aligning the holes in the bottom with the holes in the Center Cross Member of the Base Frame Assembly. Secure it in place with 2 Allen Bolts with Spring Washers. Hand tiahten.
- Align the holes in the top of the Backrest Support Frame and the center holes in the Crossbar. Insert 2 Allen Bolts and add Acorn Nuts. Hand tighten.

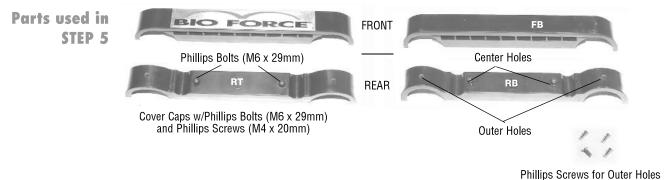

ARMS

d. With the Allen Wrench, tighten the 6 Base Frame Bolts at this time.

ASSEMBLY INSTRUCTIONS

STEP 5 – Cover Cap Installation

a. Remove the 2 (M6 x 29mm) Phillips Bolts from the Top Cover Cap for the Perforated Cover with the Phillips Screwdriver provided, and separate the front & rear sections.

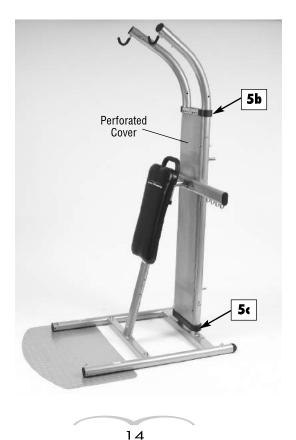

(M4 x 20mm)

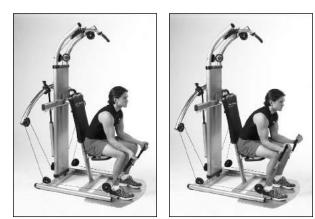

Note: The Cover Cap with the Bio Force[™] Logo goes on the top front.

b. Place the Top Cover Cap on by sliding the groove in it over the edge of the Perforated Cover. You may need to tap it into place. Set the rear of the Top Cover Cap in place. Secure the two together using the 2 (M6 x 29mm) Phillips Bolts you just removed in Step 5a and inserting them back into the 2 center holes.

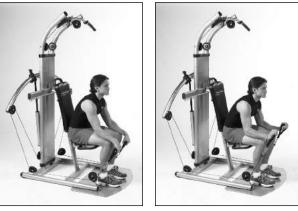

Secure the Rear Cover Cap to the Frame with 2 (M4 x 20mm) Phillips Screws, inserting into the 2 outer holes. Tighten the bolts using the Phillips Screwdriver provided.

c. Repeat item **a** and **b** for the Bottom Cover Cap.

BIO FORCE™ EXERCISES

90 SEATED WRIST CURL

START: Sit facing away. Lean forward and rest forearms on lower thighs. Grip handles in underhand grip with palms facing up and wrists extended.

MOTION: Flex wrists and curl handles toward forearms. Pause at top of motion. Extend wrists to starting position.

TIPS: Lean forward with straight back. Do not round upper or lower spine. Avoid bending elbows or lifting forearms while flexing wrists. Contract abdominals to stabilize torso.

91 SEATED REVERSE WRIST CURL

START: Sit facing away. Lean forward and rest forearms on lower thighs. Grip handles in overhand grip with palms facing down and wrists flexed.

MOTION: Extend wrists and curl handles toward forearms. Pause at top of motion. Flex wrists to starting position.

TIPS: Lean forward with straight back. Do not round upper or lower spine. Avoid bending elbows or lifting forearms while extending wrists. Contract abdominals to stabilize torso.

92 SEATED OVERHEAD TRICEPS EXTENSION

START: Sit facing away. Grip handles behind head. Point elbows front at shoulder height.

MOTION: Extend elbows and press handles overhead. Pause at top of motion. Bend elbows back to starting position.

TIPS: Keep elbows in start position throughout exercise. Do not open elbows to sides. Keep wrists straight. Maintain upright posture in seated position. Contract abdominals to stabilize torso.

• With the warning label facing out, place the bottom of the Resistance Cylinder on the Support Rod of the lower cross member of the Upright Frame with the top of the Cylinder laying out to the right of the unit. Use one of the Small Flat Washers and Hex Bolts to secure the bottom of the Resistance Cylinder. Tighten the Bolt with Wrench provided.

STEP 8 – Installing the Swing Arms and Cylinders

Standing behind the Bio Force exerciser

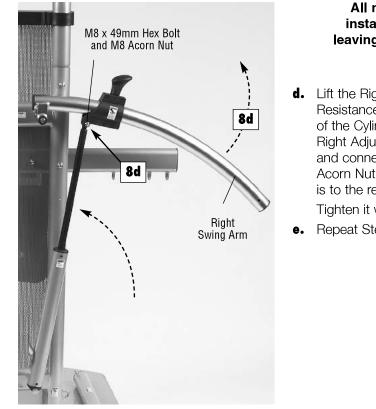

- **a.** With the calibration numbers to the front, slide the Right Swing Arm onto the Support Rod on the top cross member of the Upright Frame.
 - Use a Large Flat Washer and the Hex Bolt to secure the Right Swing Arm and tighten it using the 13mm Wrench.
- **b.** Lift the Knob on the Right Adjuster while sliding it onto the Swing Arm. Slide it to the number 20. The numbers are marked on the front of the Swing Arm.
 - The left or right will be indicated just below the Knob on the Adjuster's rear side and the calibration number must show through the window in the front of the Adjuster.

Base Frame Assembly

ASSEMBLY INSTRUCTIONS

BIO FORCE™ EXERCISES

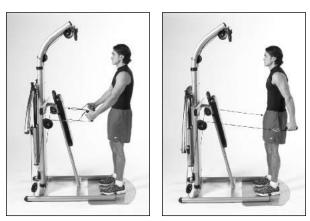

All nuts and bolts are installed front-to-rear leaving the nut on the rear.

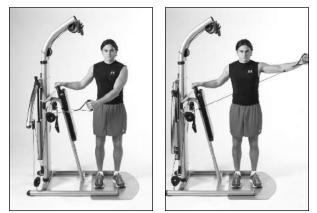

d. Lift the Right Swing Arm and the Resistance Cylinder to align the top of the Cylinder to the bottom of the Right Adjuster. Align the two pieces and connect with a Hex Bolt and Acorn Nut making sure the Nut is to the rear.

Tighten it with the Wrenches provided.

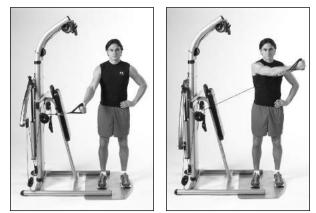

e. Repeat Step 8a - d for the Left side.

MOVABLE PULLEY POSITIONS

ASSEMBLY INSTRUCTIONS

- a. Take the 2 Pulleys without the Bio Force™ Logos, 4 Small Bushings, 4 Cable Guides and bolt them to the bottom rear of the Frame using 2 Allen Bolts and 2 Acorn Nuts. NOTE: Position flat side of Cable Guide away from Pulley. See photo 9a.
- b. Use 4 Small Bushings, 4 Cable Guides and 2 Pullevs with Bio Force™ Logos and mount them to the Top Frame with the logos facing each other. Use the 2 Allen Bolts and 2 Acorn Nuts specified. NOTE: Position flat side of Cable Guide away from Pulley. See photo 9b.
- NOTE: Position flat side of Cable Guide away from Pulley. See photo 9c.

NOTE: For Steps 9a-c - All Nuts and Bolts are installed front-to-rear – leaving the Nut on the rear.

. Use 2 Small Bushings, 2 Large Bushings, 4 Cable Guides and 2 Pulleys with Bio Force™ Logos and mount them near the ends of the Swing Arms - with the Logo facing out to the front and the Large Bushings between the Cable Guide and the Swing Arms. Use the 2 Allen Bolts and 2 Acorn Nuts specified, making sure the Nut is to the rear.

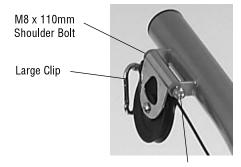

STEP 10 - Cable Assemblies

a. Stretch out and untangle the Cable. Slide the Chrome Pulley to one end of the Cable. Slide the other 2 Pulleys to the other end of the Cable. This will help keep the Cable untangled during stringing.

(continued on next page)

ASSEMBLY INSTRUCTIONS

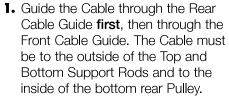

BIO FORCE™ EXERCISES

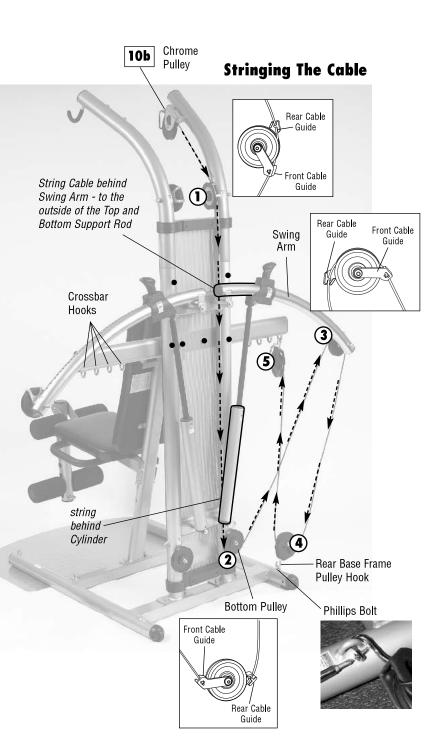

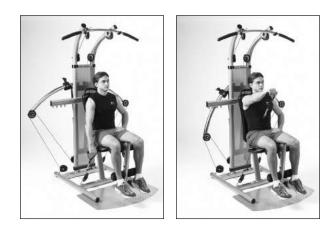

b. Using a Shoulder Bolt and Acorn Nut, attach the Chrome Pulley to the Bracket on the right Top Frame as shown. Keep the Large Clip to the front and the Nut toward the rear. The Chrome Pulley must be able to swivel. String the Cable down over the Pulley on the Top Frame, just above the Perforated Cover.

Note: You may need a step ladder to reach this high.

- **2.** Go around the bottom Pulley by stringing the Cable through the Front Cable Guide. Then string the Cable through the Rear Cable Guide.
- 3. String the Cable to the inside of the Swing Arm Pulley by feeding the Cable through the Front Cable Guide first, then through the Rear Cable Guide.
- 4. Hook the Pulley on the Cable Assembly to the Hook at the rear of the Base Frame Assembly by loosening the Phillips Bolt until the Hook on the Pulley can be attached to the Hook at the Rear of the Base Frame. Tighten the Phillips Bolt to keep the Pullev from coming off of the Hook.
- **5.** Run the Cable up to the Crossbar and hook the last Pulley to a hook point on the Crossbar.
- c. Repeat Steps **a** and **b** for the left side.
- **d.** Go back and make sure the path of the Cable appears like the photo and the Cable is not pinched at any point.
- e. **IMPORTANT:** Now, go back and tighten all Bolts on the upright frame that have only been hand tightened in previous assembly steps. The Bolts are shown with a (•) in the image above.

SHOULDERS

66 STANDING LATERAL RAISE

START: Stand facing away. Feet hip width apart on base. Grip handles with arms at sides, thumbs facing front.

MOTION: Raise arms laterally. Pause at top of motion. Lower arms to starting position.

TIPS: Raise arms to shoulder level or slightly higher. Keep elbows almost straight. Maintain upright posture throughout exercise. Do not lean or tilt backward. Keep wrists straight while raising arms. Contract abdominals to stabilize torso.

67 SINGLE ARM STANDING LATERAL RAISE

START: Stand facing away. Feet hip width apart on base. Grip one handle with arm at side, thumb facing front.

MOTION: Raise arm laterally. Pause at top of motion. Lower arm to starting position.

TIPS: Raise arm to shoulder level or slightly higher. Keep elbow almost straight. Maintain upright posture throughout exercise. Do not lean or tilt backward. Keep wrist straight while raising arm. Contract abdominals to stabilize torso. Perform on both sides.

68 STANDING REAR DELTOID ROWS

START: Stand facing frame. Feet hip width apart on base. Grip handles in front of body with palms facing down.

MOTION: Bend elbows and pull up and back. Pause at top of motion. Straighten elbows and return to starting position.

TIPS: Pull elbows slightly behind shoulder line. Keep elbows lifted and bent at a 90 degree angle. Do not lift wrists higher than elbows or shoulders. Contract abdominals to stabilize torso.

MOVABLE PULLEY

- Once your equipment is assembled, make sure it is on a solid, level surface with plenty of clearance behind and in front of your equipment.
- Store your equipment in an area away from children and high traffic areas.
- Wipe your equipment down with a soft, damp cloth frequently to prevent accumulation of sweat and dirt.
- We recommend white lithium grease if lubrication is needed.
- Regularly check the following parts for signs of fraving or other wear: the Handles, Ankle Cuffs, Cables, Pulleys, Large and Small Clips and Frame. If a part needs to be replaced, do not use the equipment until it is repaired.
- Make sure the Clips and Hitch Pins are securely in place.
- Check that the Cables are traveling correctly in the groove of each Pulley.
- Make sure Chrome Pulleys pivot easily.
- Check that Leg Bar Caps are securely in Leg Bar Tubes
- Lat Bar should always be kept in the hooks at the top of the equipment.
- Periodically check bolts to be sure they are all tight. Regularly check cables for frays and cuts. Replace if damaged

To move for storage:

We recommend you use 2 people when moving the equipment.

Make sure nothing is in your way before moving exerciser.

Grab frame securely from behind the Bio Force exerciser, place your foot on the rear cross member (as shown in figure 1), tilt back until wheels engage, roll across the floor to your desired location (figure 2).

Slowly let the front of the Bio Force exerciser down by holding the top of the Frame and placing your foot against the rear cross member until the Frame Plate is on the floor.

figure 1

We recommend you use 2 people when moving the equipment.

EXERCISE GUIDELINES EOPCE

IMPORTANT Please review this section before you begin exercising.

IMPORTANT:

If you are over 35 and have been inactive for several years, you should consult your physician, who may or may not recommend a graded exercise test. Your physician can also assist you in determining the Target Heart Rate Zone appropriate for your age and physical condition.

You should also consult your physician if you have the following:

- High blood pressure
- High cholesterol
- Asthma
- Heart trouble
- · Family history of early stroke or heart attack deaths
- Frequent dizzy spells
- Extreme breathlessness after mild exertion
- Arthritis or other bone problems
- Severe muscular, ligament or tendon problems
- Other known or suspected disease
- · If you experience any pain or tightness in your chest, an irregular heartbeat or shortness of breath, stop exercising immediately. Consult your physician before continuing.
- Pregnant
- Balance impairment
- Taking medications that affect heart rate

Workout Phases

Regardless of whether you are working out with your Bio Force[™] exerciser or doing a cardio workout, your workout should consist of the following three phases.

Warm-Up

To prevent injury and maximize performance, we recommend that each workout period should start with a warm-up. Your warm-up should gently prepare your muscles for the coming exertion. Start by doing 5 to 10 minutes of gentle exercise (such as walking) that gradually increases your heart rate and loosens up your muscles. Your warm-up exercise should be

MUSCLE GROUPS EXERCISED: Latissimus, posterior deltoid

LEVEL OF DIFFICULTY: Intermediate

59 STANDING STRAIGHT ARM PULL DOWN

START: Stand facing frame. Feet hip width apart on base. Grip lat bar in wide grip with palms facing down.

MOTION: Pull arms straight down toward hips. Pause at end of motion. Raise arms back to starting position.

TIPS: Keep arms straight throughout exercise. Do not bend elbows while pulling down. Maintain upright posture. Do not lean forward or back. Contract abdominals to stabilize torso.

aerobic in nature and only require an easy, unforced range of motion. This should be followed by 5 to 10 minutes of stretching. Refer to the stretches found on pages 40 and 41 of this manual. Never push yourself beyond a point of gentle tension or strain. Keep your movements gentle, rhythmic and controlled.

Muscle Toning or Cardio Workout

Your warm-up should be followed by either a workout with the Bio Force™ exerciser or a cardio workout, depending on which workout you are doing. Regardless of which workout you are doing, build up as your current fitness level allows and progress at a rate that is comfortable to you.

For the first week or so, you may feel some muscle soreness. This is guite normal and will disappear in a matter of days. If you experience major discomfort, you may be on a regimen that is too advanced for you or you may have increased your program too rapidly.

Cool Down and Stretching

Your workout should be followed by a cool down. The cool down should consist of 5 to 10 minutes of gentle exercise, followed by stretching. Refer to the stretches found on pages 40 and 41 of this manual. Never push yourself beyond a point of gentle tension or strain. Keep your movements gentle, rhythmic and controlled.

When to Exercise

The hour just before the evening meal is a popular time for exercise. The late afternoon workout provides a welcome change of pace at the end of the work day and helps dissolve the day's worries and tensions.

Another popular time to work out is early morning, before the work day begins. Advocates of the early start say it makes them more alert and energetic on the job.

Among the factors you should consider in developing your workout schedule are personal preference, job and family responsibilities, availability of exercise facilities and weather. It's important to schedule your workouts for a time when there is little chance that you will have to cancel or interrupt them because of other demands on your time.

You should not exercise strenuously during extremely hot, humid weather or within two hours after eating. Heat and/or digestion both make heavy demands on the circulatory system, and in combination with exercise can be an over-taxing double load.

Measuring Your Heart Rate

When checking Heart Rate during a workout, take your pulse within five seconds after interrupting exercise because it starts to go down once you stop moving. Count pulse for 10 seconds and multiply by six to get the per-minute rate.

Target Heart Rate

Aerobic intensity guidelines for healthy adults are generally set at 60 to 85 percent of heart rate. But, if you're out of shape, remember that moderate to low level and consistent cardiovascular training – well below the standard recommendations set forth – can result in substantial and beneficial effects to your health and can greatly improve cardiovascular endurance.

You can use the following calculation to determine what percentage of your heart rate you are working at:

% heart rate = $(220 - age) \times \%$.

Using this calculation, a 70% heart rate for a 40 year old would be (220 - 40) x 70% or 126. Thus, this individual would need to reach 126 beats per minute to equal a 70% heart rate.

The above recommendations are guidelines. People with any medical limitations should discuss this formula with their physician.

Clothing

All exercise clothing should be loose-fitting to permit freedom of movement, and should make the wearer feel comfortable and self-assured.

Never wear rubberized or plastic clothing, garments like this can interfere with the evaporation of perspiration and can cause body temperature to rise to dangerous evels.

Wear comfortable, supportive athletic shoes with non-slip soles, such as running or aerobic shoes.

Tips to Keep You Going

- 1. Adopt a specific plan and write it down.
- 2. Keep setting realistic goals as you go along, and remind yourself of them often.
- 3. Keep a log to record your progress and make sure to keep it up-to-date. See charts in this booklet.
- 4. Include weight and/or percent body fat measures in your log. Extra pounds can easily creep back.
- 5. Enlist the support and company of your family and friends.
- 6. Update others on your successes.
- 7. Avoid injuries by pacing yourself and including a warm up and cool down period as part of every workout.
- 8. Reward yourself periodically for a job well done!

BIO FORCE™ SYSTEM NO FORCE

The Bio Force™ exerciser is more than just a strength training machine; it is a total body exercise It is a "fitness for life" plan that goes hand in hand with an overall healthy lifestyle.

Today, all fitness research recommends both cardiovascular exercise and strength conditioning to achieve balanced fitness. By improving your cardiovascular fitness you will strengthen your heart and lungs, increase your stamina and endurance, and help with weight loss. Strength conditioning adds lean muscle to your body, which increases your body's metabolism. And we all know that a healthy eating plan is an important part of any balanced fitness program.

The Bio Force[™] System is designed to help you achieve a balanced fitness program. The system consists of 2 parts:

BIO FORCE™ WORKOUT

IMPORTANT EXERCISE AND SAFETY TIPS

- 1. Review this Owner's Manual/Exercise Book and the video completely before you begin your exercise program. Remember to follow the instructions exactly - they have been developed with your health and safety in mind.
- 2. Perform the exercises at a slow and controlled speed. For best results, perform all of the exercises at the tempo demonstrated in the video. Working at a fast pace is not recommended, and may compromise your safety and results.
- **3.** You may not be able to complete all of the sets and repetitions suggested at first. When you feel your muscles fatiguing, or are unable to work with good form and technique, decrease your resistance level or take a short break and rest.

1. Strength Conditioning. The Bio Force™ exerciser was designed to help you strengthen your upper and lower body. We recommend that you work out for at least 30 minutes, 3 times a week. However, the frequency and duration of your workouts will depend on your current fitness level and goals.

> 2. Cardiovascular Exercise. The Bio Force™ System includes a cardio workout program. You can achieve an effective cardio workout from a variety of activities, such as walking, hiking, swimming and jogging. We recommend that you do a cardio workout for at least 30 minutes, 3 times a week. You can easily alternate days for your Bio Force™ and cardio workouts. Again, the frequency and duration of your workouts will depend on your current fitness level and goals. Please refer to the Cardiovascular Workout section on pages 83 and 85 to determine the workout that is appropriate for you.

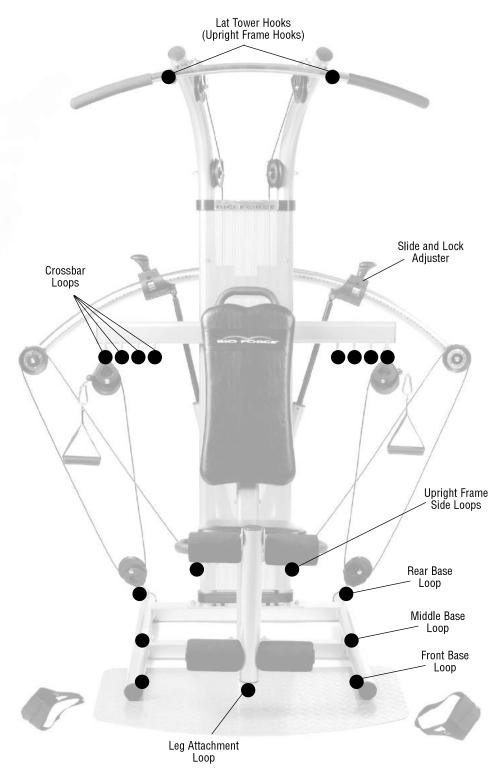

For best results, we recommend that you begin with Eric Lichter's 8 Week Body Transformation Plan on pages 30-39 of this manual.

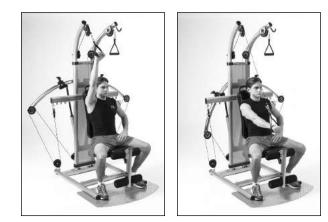

4	. Keep track of how many sets and repetitions of each exercise you are able to do at first. You will be surprised at how quickly you progress. In just a few weeks you'll probably be able to complete all of the sets and repetitions at the resistance level you choose.
5	 Progress slowly. If you are very sore and tired after your workout, you are working at a level that is too hard. Great results can be obtained by working at a level that challenges you, but doesn't create soreness and excessive fatigue.

- 6. It is important that you know how to work out safely and properly. These safety steps are for your benefit and you should follow them closely to maximize the effectiveness of your workout routine.
- 7. You should begin to feel results within one to two weeks of working out with your equipment. Look for better posture and the feeling of more strength and efficiency in your muscles.

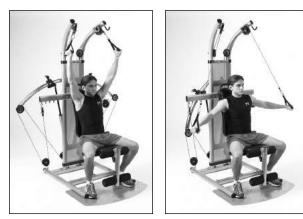

Bio Force[™] Pulley Positions

The Bio Force[™] exerciser uses a simple system of Cables, Pulleys and Hooks to perform over 100 body shaping exercises. Below you will find a diagram indicating the possible Moveable Pulley and Accessories Hooks position.

MOVABLE PULLEY POSITIONS

Your Bio Force[™] exerciser is one serious piece of exercise equipment! We recommend that before you start working out, you read the entire Owner's Manual and view the workout video that came with your equipment.

GETTING STARTED ON YOUR BIO FORCE™ EXERCISER

Adjusting Resistance with Slide-N-Lock Technology

To change resistance, it just takes seconds. Simply pull up on the Slide-N-Lock Adjuster to disengage it from its current position. Then, keeping the Adjuster disengaged, simply slide it to the next desired weight position and release it. Make sure the locking mechanism has engaged into the new resistance position. To double-check, the resistance indicator window should show "red."

Adjusting the Seat

The Bio Force seat has two height positions. If you are taller, you may wish to use the lower position to get the fullest range of motion from the Lat Tower exercises. If you are shorter, you may prefer the higher position to more easily reach the Lat Bar. It is up to you!

If you wish to change positions, simply remove the Long Hitch Pin, and pull up on the Seat to disengage it from the Positioning Pins. Move it to the new position and place the Seat onto the Positioning Pins. Once it is in place, reinsert the Long Hitch Pin to secure.

Caution-Do not use unless hitch pin is in place.

Adjusting the Leg Attachment

The lower Foam Pad on the Leg Lift Tube has 4 positions. These are to accommodate user leg length and comfort.

To change the Foam Pad, simply remove the Leg Bar Cap from one end of the Pad. Slide off the Foam Pad from that side. Now slide the Tube and remaining Pad out of the Leg Assembly hole. Reinsert into the new desired position. Replace the first Foam Pad and replace the Leg Bar Cap. Make certain the Leg Bar Cap is secured.

8 WEEK BODY TRANSFORMATION PLAN

BIO FORCE™ EXERCISES

In just two short months you can be on your way to achieving your fitness dreams. That's right...just two months...eight weeks...60 days.

That is all it takes to follow my body transformation plan. And best of all, when you finish my 8 week program, you'll be hooked. You are going to feel and look better than ever. Friends, relatives and co-workers are going to marvel at the changes in your body. And you know what? You are going to want more!

ERIC LICHTER Professional Trainer

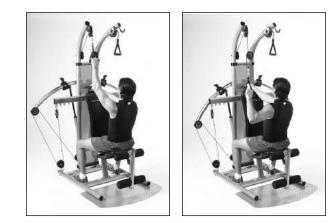

So what have you got to lose? Step up and take the eight week challenge. I don't care how old you are...I don't care what shape you are in...I don't care if you're an elite athlete or the farthest you walk is from the couch to the fridge. You're going to work...You're going to sweat...And I'm going to make sure you love every minute of it! The results you'll see when you take the eight week challenge are going to blow you away! So get ready to get yourself into the best shape of your life and see what you've been missing!

PLAN INTRODUCTION:

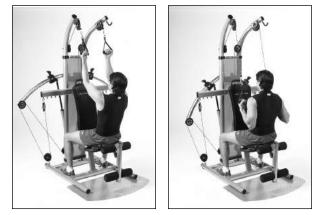

Any fitness plan has three parts: Strength Training, Proper Nutrition and Aerobic Exercise. Each part is essential to success. If you miss anyone of the elements, you will not see the results you are after. My 8 Week Plan contains all three. Take a look at the outlines below. Review each part and make them a part of your life.

GETTING STARTED:

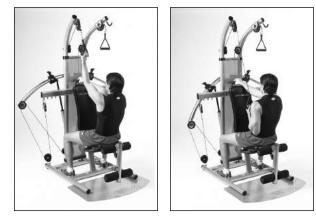

Everyone has to start somewhere...and this is it. Take a photo of yourself today in your swimsuit. Guys - shirts off! Ladies - make it a two piece! Now is the time to make an honest assessment of where you are...and where you want to go. Also, take your measurements. You will find a body measurement guide at the end of this manual. Note that we are not going to concern ourselves too much with body weight. This is because body weight does not always tell the whole story. It is a fact that fat weighs less than muscle, but muscle is leaner and more compact than fat. So...you can be losing inches and getting the lean, sexy body you've always wanted, but not be losing that much weight. That is because you are trading fat for muscle. Therefore, a better indicator is inch loss...Even easier than that is noticing how much better your clothes fit. Okay...so you've taken your picture and your measurements. Store them in a safe place. In 8 weeks, you are going to be amazed at the difference!

PART ONE:

STRENGTH TRAINING WITH THE **BIO FORCE™ EXERCISER**

The first part of our fitness equation is strength training. The benefits of strength training are well known...but just in case you forgot...here are a few highlights, courtesy of my friend Douglas Brooks, MS, Exercise Physiologist:

• Fat Loss, Weight Control, Weight Maintenance

One advantage resistance training offers is a leaner body. Maintaining or increasing muscle mass preserves your ability to burn higher numbers of calories. Your body is operating at a higher metabolic rate and it's easier to maintain or lose weight.

Increased Metabolism

If you have a lot of muscle, your metabolism is higher and you "burn" more calories since muscle is metabolically active.

• Increased Calorie Burning During Resistance Training

Any activity, including strength training, burns calories during the activity and contributes to fitness.

• Increased Calorie Burning After Exercise

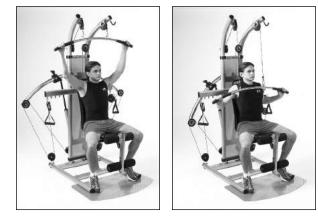

Vigorous strength training significantly elevates calorie burning (metabolic rate) anywhere from 30 to 60 minutes or longer after you've finished.

• Reductions in Resting Blood Pressure

If you have high blood pressure or borderline high blood pressure, generally it's acceptable to use moderate resistance and perform 15-20 repetitions to fatigue. Diet and exercise can lower blood pressure. Check with a doctor to get a specific recommendation.

• Positive Changes in Cholesterol Profiles

HDL cholesterol (the "good guy") is raised primarily by exercising and losing fat. Of course, diet (i.e., proper food choices) is important to lower harmful LDL (the "bad guy" cholesterol) and triglycerides (fat).

MUSCLE GROUPS EXERCISED: Latissimus, biceps LEVEL OF DIFFICULTY: Beginner

• A Stronger Body That is Less Prone to Injuries

Stronger muscles increase the thickness and strength of tendons (which connect muscles to bones) and ligaments (which provide integrity to joints by connecting bone-to-bone). Stronger muscles let you perform better, and with less chance of injury to the muscles, tendons, ligaments and joints.

Personal Physical Independence

Many people lose their "freedom" because they've lost the strength to be mobile. Strong individuals perform better and physical activity feels good to their bodies.

Improved Posture

Strength and flexibility are the keys to correct body alignment. You guite possibly will look and feel better!

Improved Physical Image

Strength training will change how you look. If you don't believe this, compare a runner who only trains the cardiovascular system with an athlete who strength trains as well as participates in aerobic activity.

Improved Self-Esteem

You'll feel strong, look strong and think that you're strong. In fact, you will be strong!

Now that we've reviewed why it is important to strength train, there is no question that you should do it! At the end of this section you will find my 8 week workout plan that shows you exactly how to use your Bio Force™ exerciser for the next eight weeks.

PART TWO: PROPER NUTRITION

All of the strength training in the world can't overcome a poor diet. If you truly want to get in the best shape of your life, you need to give your body the right "fuel!" Included with your Bio Force™ exerciser you will find a booklet entitled "Eating Plan." The Eating Plan included was developed by a nutritionist. It includes a complete and thorough diet program designed to help you eat healthy foods and in the right portions. Review this plan carefully and follow its recommendations for the duration of the 8 week program.

PART THREE: AEROBIC EXERCISE

And last but not least - aerobic exercise. This is the final piece of the "new you" puzzle. By elevating your heart rate just a few times a week, you will increase your cardiovascular endurance, burn calories and help guarantee your success. At the end of this manual you will find a complete section devoted to the benefits of aerobic exercise. Refer to the Aerobic Exercise portion of the guide for a complete rundown of aerobic activities and guidelines. For the duration of the 8 week program you should do 20 minutes of aerobic exercise 4 times a week as instructed below.

Get to it!

All right! What are we waiting for? Now is the time to begin! Make sure to incorporate all 3 parts of my plan into your "new you" program. In just 8 short weeks you are going to look and feel amazing! And don't forget to take some photos of yourself at the end of week eight... I would love to hear about your results.

8 WEEK BODY TRANSFORMATION WORKOUT

The following workout is comprised of 32 total workouts. In addition to proper eating, you will do an aerobic workout and work out on the Bio Force™ exerciser 4 times a week, for 8 weeks. Make sure to rest in between days.

Now when you start the Bio ForceTM workout, use a light amount of resistance and slowly progress up to heavier resistance. How do you know how much weight is right for you? Easy...when you are exercising, your muscles should reach fatigue at the end of the 15 reps. If they are not fatigued at the end of 15 repetitions, you need to add more resistance...and if you can't make it to 15 reps, you will need to subtract resistance.

Review how to adjust the resistance with Slide-N-Lock Technology on page 29 of this manual.

Now Let's Get Started! Here are the 32 individual Bio Force[™] workouts, Each contains a list of exercises you are to perform. The first number next to each exercise is the number of "sets" you are to execute. The second number indicates the numbers of "repetitions" in each set. So for the very first exercise in workout #1, 15 squats equal 1 complete set. And you are to complete three sets.

After completing your Bio Force[™] workout, you should finish your Body Transformation Workout by completing 20 minutes of aerobic exercise. Refer to the Aerobic Exercise portion of this manual for a complete list of aerobic exercises and additional guidelines.

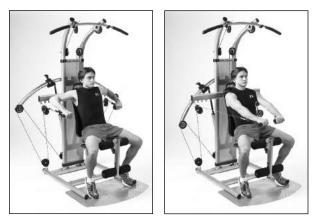

Also note that before and after EVERY WORKOUT you will need to perform the general warm up, cool down, and stretching routine that is recommended in this manual. Please refer to page 25 for the specific details to the stretching. warm up, and cool down routines.

38 INCLINE CHEST FLYE

START: Sit facing away. Grip handles with arms open to sides. Palms facing front.

MOTION: Close and angle arms upward to head height. Pause at end of motion. Open and lower arms to starting position.

TIPS: Keep arms almost straight throughout exercise. Do not bend elbows at end of motion. Elbows and wrists in line with shoulders. Maintain upright posture in seated position. Contract abdominals to stabilize back.

39 SINGLE ARM INCLINE CHEST FLYE

START: Sit facing away. Grip one handle with arm open to side. Palm facing front.

MOTION: Close and angle arm upward to head height. Handle to midline of forehead. Pause at end of motion. Open to starting position.

TIPS: Keep arm almost straight throughout exercise. Do not bend elbow at end of motion. Avoid rotating torso while pressing. Maintain upright posture in seated position. Contract abdominals to stabilize back. Perform on both sides.

40 DECLINE CHEST PRESS

START: Sit facing away with hips forward on seat, shoulders touching backrest. Grip handles with cables under arms. Elbows bent 90 degrees at shoulder evel.

MOTION: Extend elbows and press arms forward and downward. Pause at end of motion. Bend elbows back to starting position.

TIPS: Press arms downward to hip level. Keep elbows in line with shoulders and wrists straight. Maintain straight spine position while leaning back. Do not round lower back. Contract abdominals to stabilize back.

WEEK ONE

WORKOUT #1 (45 sec rest between all sets)

- Squats 3 sets of 15 reps (3 x 15) • Seated Chest Press - 3 x 15
- Single Leg Squats 2 x 15
- Incline Chess Press 2 x 15
- Seated Leg Extensions 2 x 15
- Chest Flyes 2 x 15
- Lat Bar Pull Down (front) 3 x 15
- Standing Triceps Pushdowns 3 x 15

WORKOUT #2 (45 sec rest between all sets)

- Straight Leg Dead Lifts 3 x 15
- Seated Shoulder Press 3 x 15
- Leg Curls 3 x 15 + 15
- 3 sets of 15 for each exercise $(3 \times 15 + 15 + 15)$
- Standing Biceps Curls 3 x 15
- Calf Raises $3 \times 10 + 10 + 10$ (toes in, out & straight)
- Seated Spinal Extension 3 x 15

WORKOUT #3 (45 sec rest between all sets)

- Single Leg Squats 3 x 15 + 15
- Single Arm Seated Chest Press 3 x 15 + 15
- Seated Single Leg Extension 3 x 15 + 15
- Single Arm Incline Chest Press 3 x 15 + 15 • Standing Rows - 3 x 15
- Reverse Grip Pull Down 2 x 15
- Seated Overhead Triceps Extension 2 x 15
- Ab Crunch 2 x 15 2 second holds at flexed position
- Oblique Crunch $2 \times 15 + 15$

WORKOUT #4 (45 sec rest between all sets)

- Straight Leg Dead Lifts 4 x 15
- Single Arm Shoulder Press 4 x 15 + 15
- Leg Curls 4 x 15 + 15

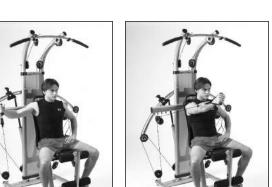

- Standing Biceps Curls 3 x 15
- Calf Raises $3 \times 10 + 10 + 10$ (toes in, out & straight)
- Seated Spinal Extension 3 x 15

WEEK TWO WORKOUT #5 (60 sec rest between all sets)

- Squats 4 x 15
- Seated Chest Press 4 x 15
- Single Leg Squats 2 x 12
- Incline Chest Press 2 x 12
- Seated Leg Extensions 2 x 12
- Chest Flyes 2 x 12
- Lat Bar Front Pull Down 4 x 12
- Standing Triceps Pushdowns 4 x 15
- Ab Crunch 3 x 15 2 second holds at flexed position
- Oblique Crunch $3 \times 15 + 15$

MUSCLE GROUPS EXERCISED: Pectoralis, anterior deltoids LEVEL OF DIFFICULTY: Intermediate/Advanced

37 SINGLE ARM CHEST FLYE

START: Sit facing away. Grip one handle with arm open to side. Palm facing front.

MOTION: Close arm in front of chest. Handle to midline of chest. Pause at end of motion. Open arm to starting position.

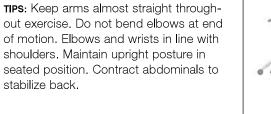

TIPS: Keep arm almost straight throughout exercise. Do not bend elbow at end of motion. Avoid rotating torso while pressing. Maintain upright posture in seated position. Contract abdominals to stabilize back. Perform on both sides.

8 WEEK BODY TRANSFORMATION PLAN

• Ab Crunch - 2 x 15 – When bent down (flexed position) hold this position for 2 seconds before releasing to a relaxed position. • Oblique Crunch - 2 x 15 + 15 (15 reps to the left side and 15 reps to the right side)

• Shoulder Shrugs, Standing Lateral Raises and Standing Front Raises - 3 x 15 • Standing Hip Flexion, Lying Hip Abduction and Adduction - 3 x 10 + 10 + 10

• Shoulder Shrugs, Standing Lateral Raises and Standing Rear Deltoids Rows - 3 x 15 + 15 + 15 • Standing Hip Flexion, Lying Hip Abduction and Adduction - 3 x 10 + 10 + 10

WORKOUT #6 (60 sec rest between all sets)

- Straight Leg Dead Lifts 4 x 15
- Seated Shoulder Press 4 x 15
- Leg Curls 4 x 15 + 15
- Shoulder Shrugs, Standing Lateral Raises and Standing Front Raises 4 x 15 + 15 + 15
- Standing Hip Flexion, Lying Hip Abduction and Adduction 3 x 10 + 10 + 10
- Standing Biceps Curls 4 x 15
- Calf Raises $4 \times 10 + 10 + 10$ (toes in, out & straight)
- Seated Spinal Extension 4 x 15

WORKOUT #7 (60 sec rest between all sets)

- Single Leg Squats 4 x 15 + 15
- Single Arm Seated Chest Press 4 x 15 + 15
- Seated Single Leg Extension 2 x 15 + 15
- Single Arm Incline Chest Press 2 x 15 + 15
- Standing Rows 4 x 15
- Reverse Grip Pull Down 4 x 15
- Seated Overhead Triceps Extension 4 x 15
- Ab Crunch 3 x 15 2 second holds at flexed position
- Oblique Crunch 3 x 15 + 15

WORKOUT #8 (60 sec rest between all sets)

- Straight Leg Dead Lifts 4 x 15
- Single Arm Seated Shoulder Press 4 x 15 + 15
- Leg Curls 4 x 15 + 15
- Shoulder Shrugs, Standing Lateral Raises and Standing Rear Deltoids 4 x 15+15+15
- Standing Hip Flexion, Lying Hip Abduction and Adduction 4 x 10 + 10 + 10
- Standing Biceps Curls 4 x 15
- Calf Raises $3 \times 10 + 10 + 10$ (toes in, out & straight)
- Seated Spinal Extension 4 x 15

WEEK THREE WORKOUT #9 (60 sec rest between all sets)

- Squats 4 x 12
- Seated Chest Press 4 x 12
- Single Leg Squats 2 x 12
- Incline Chest Press 2 x 12
- Seated Leg Extensions 2 x 12
- Chest Flyes 2 x 12
- Lying Hip Extension 3 x 10 + 10
- Lat Bar Front Pull Down 4 x 12
- Standing Triceps Pushdowns 4 x 12
- Ab Crunch 3 x 12 3 second holds at flexed position
- Oblique Crunch $3 \times 12 + 12$

WORKOUT #10 (60 sec rest between all sets)

- Straight Leg Dead Lifts 4 x 12
- Seated Shoulder Press 4 x 12
- Leg Curls 4 x 12 + 12
- Shoulder Shrugs, Standing Lateral Raises and Standing Front Raises 4 x 12 + 12 + 12
- Standing Hip Flexion, Lying Hip Abduction and Adduction 4 x 8 + 8 + 8
- Standing Biceps Curls 4 x 12
- Calf Raises $4 \times 10 + 10 + 10$ (toes in, out & straight)
- Seated Spinal Extension 4 x 12

MOVABLE PULLEY POSITIONS

```
• Shoulder Shrugs, Standing Lateral Raises and Standing Rear Deltoids Rows - 4 x 12 + 12 + 12
• Standing Hip Flexion, Lying Hip Abduction and Adduction - 3 x 10 + 10 + 10
```

```
• Shoulder Shrugs, Standing Lateral Raises and Standing Front Raises - 4 x 10 + 10 + 10
• Standing Hip Flexion, Lying Hip Abduction and Adduction - 4 x 10 + 10 + 10
• Calf Raises - 4 \times 10 + 10 + 10 (toes in, out & straight)
```

```
• Single Arm Incline Chest Press - 2 x 12 + 12
```

NOTE: Starting with Workout #16 of the program you will notice that you are to complete "SUPER SETS." What is a "Super Set?" It is simply a combination of two different exercises performed one right after the other without any rest. So for example, in Workout #16 you are to perform a Super Set consisting of Standing Biceps Curls and Standing Hammer Curls. You will do 4 sets of Biceps Curls (12 reps each) and then immediately begin performing 4 sets of the Standing Hammer Curl (8 reps each.)

WORKOUT #16 (60 sec rest between all sets)

- Straight Leg Dead Lifts 4 x 12
- Single Arm Shoulder Press 4 x 12 + 12
- Leg Curls 4 x 12 + 12
- Shoulder Shrugs, Standing Lateral Raises and Standing Rear Deltoid Rows 4 x 10 + 10 + 10
- Standing Hip Flexion, Lying Hip Abduction and Adduction 4 x 10 + 10 + 10
- SUPER SET Standing Biceps Curls 4 x 12
 - Standing Hammer Curls 4 x 8
- Calf Raises 4 x 10 +10 +10 (toes in, out & straight)
- Seated Spinal Extension 4 x 12

WEEK FIVE WORKOUT #17 (60 sec rest between all sets)

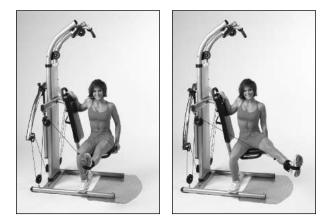

- SUPER SET Squats 5 x 8
 - Single Leg Squats 5 x 8
- SUPER SET Seated Chest Press 5 x 8
 - Chest Flyes 5 x 8
- SUPER SET Seated Leg Extensions 2 x 8 • Standing Hip Abduction - 2 x 8
- SUPER SET Lat Bar Front Pull Down 5 x 8
 - Standing Triceps Pushdowns 5 x 8
 - Closed Grip Chest Press 5 x 8
- Ab Crunch 4 x 10 4 second holds at flexed position
- Oblique Crunch w/Twists 4 x 10 + 10

WORKOUT #18 (60 sec rest between all sets)

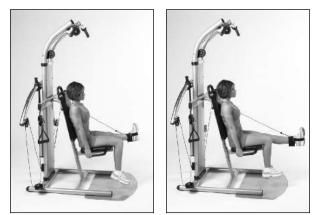

- Straight Leg Dead Lifts 5 x 8
- Seated Shoulder Press 5 x 8
- Leg Curls 5 x 8 + 8
- Shoulder Shrugs, Standing Lateral Raises and Standing Front Raises 5 x 8 + 8 + 8
- Standing Hip Flexion, Lying Hip Abduction and Adduction 5 x 8 + 8 + 8
- Standing Biceps Curls 5 x 8
- Calf Raises $5 \times 8 + 8 + 8$ (toes in, out & straight)
- Seated Spinal Extension 5 x 8

WORKOUT #19 (60 sec rest between all sets)

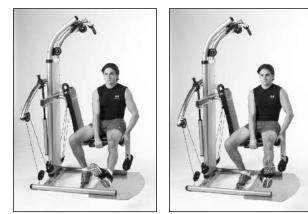

- SUPER SET Squats 5 x 8
 - Single Leg Squats $5 \times 8 + 8$
- SUPER SET Seated Chest Press 5 x 8
 - Single Arm Seated Chest Press 5 x 8 + 8
- SUPER SET Seated Leg Extension 2 x 8 • Leg Curls - 2 x 8
- SUPER SET Single Arm Incline Chest Press 2 x 8 + 8 • Single Arm Standing Rows - 2 x 8 + 8
- SUPER SET Reverse Grip Pull Down 5 x 8 • Standing Triceps Pushdowns - 5 x 8
- Ab Crunch 3 x 10 4 second holds while flexed
- Oblique Crunch $2 \times 10 + 10$

MUSCLE GROUPS EXERCISED: Gluteals, hamstrings LEVEL OF DIFFICULTY: Beginner

MUSCLE GROUPS EXERCISED: Gluteals, hamstrings, abdominals

LEVEL OF DIFFICULTY: Intermediate

LEGS

22 LYING SINGLE IFG PRESS

START: Lie on back facing away, shoulders on base. Foot harnesses/cuffs on ankles. Grip base of frame. Bend hip and knee of one leg.

MOTION: Extend hip and knee until leg is straight. Pause at end of motion. Return to starting position.

TIPS: Keep knee in line with shoulder throughout exercise. Do not excessively arch back off floor as leg extends. Contract abdominals to stabilize back. Perform on both sides.

23 SCISSOR KICKS

START: Lie on back facing away, shoulders on base. Foot harnesses/cuffs on ankles. Grip base of frame. Lift one leg perpendicular to floor.

MOTION: Lower leg straight down to floor. Simultaneously lift other leg. Continue alternating legs in "scissor" motion.

TIPS: Keep legs straight while lifting and lowering. Do not allow legs to open to the side. Keep knees in line with shoulders throughout exercise. Do not excessively arch back off floor. Contract abdominals to stabilize back.

24 FLUTTER KICKS

START: Lie on back facing away, shoulders on base. Foot harnesses/cuffs on ankles. Grip base of frame. Lift one leg 12 inches off floor.

MOTION: Lower leg straight down to floor. Simultaneously lift other leg 12 inches off floor. Continue alternating legs in small "flutter" motion.

TIPS: Keep legs straight while lifting and lowering. Do not allow legs to open to the side. Keep knees in line with shoulders throughout exercise. Do not excessively arch back off floor. Contract abdominals to stabilize back.

- (toes in, out & straight)

WORKOUT #31 (60 sec rest between all sets)

- Ab Crunch 2 x 15, 2 x 10, 2 x 8, 2 x 6, 1 x 15

WORKOUT #32 (60 sec rest between all sets)

- 1 x 8 + 8 + 8, 1 x 6 + 6 + 6, 1 x 15 + 15 + 15
- (toes in, out & straight)
- Seated Spinal Extension 2 x 15, 2 x 10, 2 x 8, 2 x 6, 1 x 15

19 LYING HIP ABDUCTION/ ADDUCTION

START: Lie on back facing away, shoulders on base. Foot harnesses/cuffs on ankles. Grip base of frame. Lift legs 6 inches off floor.

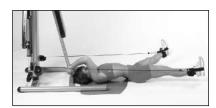

MOTION: Open both legs to the side. Pause at end of motion. Close leas back to starting position.

TIPS: Keep both legs straight and lifted off floor while opening and closing. Do not excessively arch back off floor. Contract abdominals to stabilize back. Modify by lowering one leg to floor and performing on one side.

• Straight Leg Dead Lifts - 2 x 15, 2 x 10, 2 x 8, 2 x 6, 1 x 15 • Single Arm Shoulder Press - 2 x 15 + 15, 2 x 10 + 10, 2 x 8 + 8, 2 x 6 + 6, 1 x 15 + 15 • Leg Curls - 2 x 15 + 15, 2 x 10 + 10, 2 x 8 + 8, 2 x 6 + 6, 1 x 15 + 15 • Standing Hip Flexion, Lving Hip Abduction and Adduction - 1 x 15 + 15 + 15. 1 x 10 + 10 + 10. • Standing Biceps Curls - 2 x 15, 2 x 10, 2 x 8, 2 x 6, 1 x 15 • Calf Raises - 1 x 15 + 15 + 15, 1 x 10 + 10 + 10, 1 x 8 + 8 + 8, 1 x 6 + 6 + 6, 1 x 15 + 15 + 15

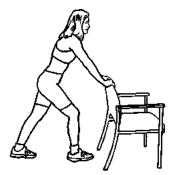

When performing these stretches, your movements should be slow and smooth, with no bouncing or jerking. Move into the stretch until you feel a slight tension, not pain, in the muscle and hold the stretch for 20 to 30 seconds. Breathe slowly and rhythmically. Be sure not to hold your breath. Remember that all stretches must be done for both sides of your body.

1. Quadriceps Stretch

Stand close to a wall, chair or other solid object. Use one hand to assist your balance. Bend the opposite knee and lift your heel towards your buttocks. Reach back and grasp the top of your foot with the same side hand. Keeping your inner thighs close together, slowly pull your foot towards your buttocks until you feel a gentle stretch in the front of your thigh. You do not have to touch your buttocks with your heel. Stop pulling when you feel the stretch. Keep your kneecap pointing straight down and keep your knees close together. (Do not let the lifted knee swing outward.)

Hold for 20 to 30 seconds. Repeat for the other leg.

2. Calf and Achilles Stretch

Stand approximately one arms length away from a wall or chair with your feet hip-width apart. Keeping your toes pointed forward, move one leg in close to the chair while extending the other leg behind you. Bending the leg closest to the chair and keeping the other leg straight, place your hands on the chair. Keep the heel of the back leg on the ground and move your hips forward. Slowly lean forward from the ankle, keeping your back leg straight until you feel a stretch in vour calf muscles.

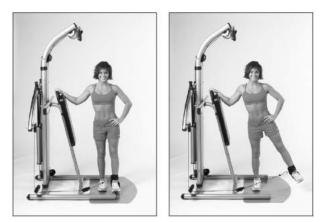

Hold for 20 to 30 seconds. Repeat for the opposite leg.

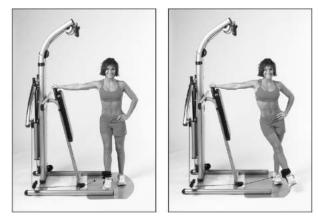

3. Overhead/Triceps Stretch

Stand with your feet shoulder width apart and your knees slightly bent. Lift one arm overhead and bend your elbow, reaching down behind your head with your hand toward the opposite shoulder blade. Walk your fingertips down your back as far as you can. Hold this position. Reach up with your opposite hand and grasp your flexed elbow. Gently assist the stretch by pulling on the elbow.

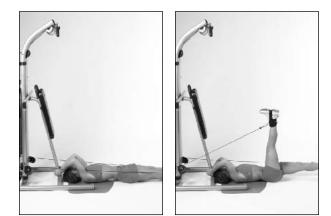

Hold for 20 to 30 seconds. Repeat for the opposite arm.

MUSCLE GROUPS EXERCISED: Hip adductors LEVEL OF DIFFICULTY: Beginner

MUSCLE GROUPS EXERCISED: Gluteals, hamstrings LEVEL OF DIFFICULTY: Beginner

LEGS

16 STANDING HIP ABDUCTION

START: Stand facing side. Foot harness/ cuff on outside ankle, inside foot on base. Grip handle at top of seat.

MOTION: Lift leg to side, toes facing front. Pause at end of motion. Lower to starting position.

TIPS: Keep leg straight while lifting. Lift leg directly to side. Avoid angling leg front or back, or lifting toes. Maintain upright body position. Do not tip body as leg lifts. Contract abdominals to stabilize back. Perform on both sides.

17 STANDING HIP **ADDUCTION**

START: Stand facing side. Foot harness/ cuff on inside ankle, outside foot on base. Grip handle at top of seat.

MOTION: Pull inside leg across supporting leg, toes facing front. Pause at end of motion. Return to starting position.

TIPS: Pull working leg in front of supporting leg. Maintain upright body position. Do not tip body as leg pulls across. Contract abdominals to stabilize back. Perform on both sides.

18 LYING HIP EXTENSION

START: Lie on back facing away, shoulders on base. Foot harnesses/cuffs on ankles. Grip base of frame. Lift one leg perpendicular to floor.

MOTION: Lower leg straight down to floor. Pause at end of motion. Slowly raise to starting position.

TIPS: Keep leg straight while lifting and lowering. Do not allow leg to open to the side. Keep knee in line with shoulder throughout exercise. Do not excessively arch back off floor. Contract abdominals to stabilize back. Perform on both sides.

WARM-UP AND COOL-DOWN STRETCHES

Stand with your legs shoulder width apart and your knees slightly bent. Bend forward from your waist with your arms extending loosely in front of your body. Gently bend from the waist flexing your body as far forward as it will go.

Stand with your legs hip-width apart. Extend one leg out in front of you and keep that foot flat against the ground. With your hands resting lightly on your thighs, bend your back leg and lean forward slightly from your hips until you feel a stretch in the back of your thigh. Be sure to lean forward from the hip joint rather than bending at your waist.

Hold for 20 to 30 seconds. Repeat for the opposite leg.

6. Buttocks. Hips and Abdominal Stretch

Lay flat on your back with your hips relaxed against the floor. Bend one leg at the knee. Keeping both shoulders flat on the floor, gently grasp the bent knee with your hands and pull it over your body and towards the ground. You should feel a stretch in your hips, abdominals and lower back.

Hold for 20 to 30 seconds and release. Repeat for opposite side.

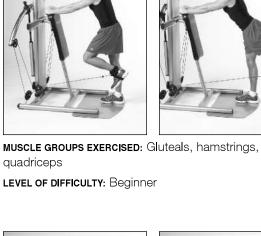

Sit on the floor and bend your legs so that the soles of your feet are together. Place your elbows on your knees. Lean forward from the waist and press down lightly on the inside of your knees. You should feel a stretch in the muscles of your inside thigh.

Hold for 20 to 30 seconds and release.

8. Arm Pullback

Stand with your feet shoulder width apart and toes pointing forward and with your knees slightly bent. Let your arms hang relaxed on either side of your body. Expand your chest and pull your shoulders back. Bend your elbows slightly and clasp your hands behind your back. Slowly straighten your arms as you lift your hands upward. Raise your hands upward until you feel mild tension in your shoulder and chest region.

your sides.

MUSCLE GROUPS EXERCISED: Hip flexors LEVEL OF DIFFICULTY: Advanced

13 STANDING LEG PRESS

START: Stand facing frame. Foot harness/ cuff on one ankle, other foot on base. Grip handle at top of seat with both hands. Bend hip and knee of working leg.

MOTION: Extend hip and knee. Press leg straight back behind body. Pause at end of motion. Flex hip and knee back to starting position.

TIPS: Keep arms straight to stabilize torso. Maintain forward lean with straight back. Contract abdominals to stabilize back. Perform on both sides.

14 STANDING HIP FLEXION

START: Stand facing away. Foot harness/ cuff on one ankle, other foot on base. Place hands on hips.

MOTION: Flex hip and raise leg until thigh is parallel to floor. Pause at top of motion. Lower to starting position.

TIPS: Maintain upright body position. Do not lean forward or back as leg lifts. Contract abdominals to stabilize back. Perform on both sides.

MUSCLE GROUPS EXERCISED: Gluteals, hamstrings LEVEL OF DIFFICULTY: Beginner

15 STANDING HIP **EXTENSION**

START: Stand facing frame. Foot harness/ cuff on one ankle, other foot on base. Grip handle at top of seat. Bend knee 90 degrees in front of body.

MOTION: Extend hip. Pull thigh in line with or slightly behind standing leg. Pause at end of motion. Return to starting position.

TIPS: Keep knee bent while extending hip. Maintain forward lean with straight back. Keep arms straight to stabilize torso. Contract abdominals to stabilize back. Perform on both sides.

Developing Your Bio Force[™] Workout

The choices you make about the frequency (how often), the duration (how long), and intensity (how hard) at which you will workout, will directly influence your results.

Before beginning any workouts on the Bio Force[™] exerciser, you should first determine your current fitness level. The following are guidelines that you can use to determine your fitness level, but remember these are just guidelines. You must always listen to your body. Start out at a level that is comfortable to you and progress sensibly.

Beginner – No previous exercise experience, or have not exercised in a long time.

Intermediate - Have been performing exercises regularly for three months or more.

Advanced - Have been performing exercises regularly for six months or more.

BIO FORCE™ EXERCISES

MUSCLE GROUPS EXERCISED: Gluteals, hamstrings, quadriceps

LEVEL OF DIFFICULTY: Beginner

MUSCLE GROUPS EXERCISED: Gluteals, hamstrings, quadriceps

LEVEL OF DIFFICULTY: Intermediate/Advanced

START: Stand facing frame. Feet hip width apart on base. Grip handles at shoulders.

MOTION: Flex knees, hips and ankles. Lower until thighs are parallel to floor or slightly higher. Press up to starting position.

TIPS: Keep knees in line with toes. Center weight over arches, not toes or heels. Lift chest and keep back straight as hips lower. Keep head lifted and in line with spine. Contract abdominals to stabilize back.

2 SINGLE LEG SQUAT

START: Stand facing frame. Split-leg

MOTION: Flex knees, hips and ankles. Lower until front thigh is parallel to floor

or slightly higher. Press up to starting

TIPS: Keep weight on front leg and front knee in line with toes. Align shoulders

over hips. Lift chest and keep back

straight while lowering. Contract

abdominals to stabilize back.

Perform on both sides.

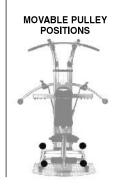

stance with back heel lifted. Grip

handles at shoulders.
